

1. FastAPI Framework Knowledge

FitBuddy – AI Fitness Plan Generator using Gemini Models

FastAPI is the web framework used to build the FitBuddy application. It handles HTTP routes, form submissions, API endpoints, request validation, and application startup.

Important Points

- Used to create the FitBuddy backend.
- Supports routes such as /, /generate-workout, /submit-feedback, and /view-all-users.
- Works with Pydantic models for input validation.
- Runs with an ASGI server such as Uvicorn.
