

7. Environment Setup (pip, virtualenv, or conda)

FitBuddy – AI Fitness Plan Generator using Gemini Models

A Python virtual environment and package manager are used to prepare the FitBuddy development environment.

Important Points

- Create an environment using `python -m venv fitbuddy-env`.
- Activate it before installing dependencies.
- Install FastAPI, Uvicorn, Jinja2, SQLAlchemy, python-multipart, and Google Generative AI packages.
- Store the Gemini API key in `GOOGLE_API_KEY`.
- Run the application locally with Uvicorn.
